NEON-Rate Sheet Processing for UK VoIP Providers

Rate sheet is a rate list provided by different vendors from different countries, which are using different VoIP soft switches to manage their VoIP traffic. They all can have different rate sheet formats according to their business needs. Vendors then take that rate sheet and process it for Least Cost Routing (LCR) and select the suitable vendor according to rates. After applying margin, they then send those rate sheets to their customers or vendors.

Rate Sheets Processing:

There are many columns in these rate sheets which are not useful and very time consuming when comes to sorting them out according to your needs, every time you process rate sheets. It also makes it difficult for the vendors to generate LCRs thus taking numerous man-hours if one tries to do it manually.

Rate Sheet Processing with NEON:

There are many tools available in the market to do this job for you but NEON; a complete telecom process management solution, is a feature-rich system to full-fill all your telecom needs.

Rate Management module in **NEON**, cannot only process the BT or any other rate sheets for you but, there are other features like Rate Comparison Tools, with which you can compare different rates provided by different vendor's side-by-side and generate LCR for different scenarios.
